

# SAKURA CABIN AIRFILTERS

Airborne contaminants such as pollution, pollen, dust and debris can block your cabin air filter and decrease the efficiency of your vehicles air conditioning system. Protect passengers by choosing Sakura cabin airfilters as a cost effective replacement.

Sakura cabin airfilters are ideal for most popular car makes and models.

Your cabin airfilter should be changed at least once per year or every 20,000kms to help improve the air conditioning and air quality of your vehicle.
