

Bosun's Mate is an environmentally responsible multi-purpose cleaner, salt remover and surface protectant. It can be used in all areas where surfaces and equipment is dirty, soiled or has been in contact with salt water.

Bosun's Mate is manufactured using **readily biodegradable*** surfactants and chelating agents along with a protective polymer. The formulation reduces the ability of salt, dirt and oil to re-adhere to surfaces that have been cleaned with Bosun's Mate.

Vessel and Jet Boat Cleaning

Engine Flush – by flushing your engines cooling system with Bosun's Mate removes the opportunity for salt water chlorides corroding the engine. It also assists in removing existing build up improving your engines performance.

Bosun's Mate also leaves a protective layer to resist the re-depositing of soil and salt.

Vessel Cleaning – using the Bosun's Mate foamer or bucket and sponge/soft bristled brush apply Bosun's Mate all over the boat. Leave for 5 – 10 mins and rinse off. It is excellent for taking odours out of bins and other storage containers. Use at a dilution rate of 10 -1 (100 mls per litre). Use a foaming device for easy cleaning over large surfaces.

Windows – Inside windows often mist up inside the boat – use neat and spray onto the window. Use a clean dry cloth to completely wipe the surface clean.

Outside windows – spray on the outside at a dilution of 20 – 1 and use a clean cloth to wipe dry. Bosun's Mate will help the outside windows to have less moisture – it won't completely overcome condensation due to differences in heat between the outside and inside but it will help.

Equipment Cleaning

Equipment Cleaning – using the Bosun's Mate foamer or bucket and sponge/soft bristled brush apply Bosun's Mate all over the equipment. Leave for 5 – 10 mins and rinse off. Use at a dilution rate of 10 -1 (100 mls per litre). The protective layer will assist in stopping soil from redepositing.

Heavy Vehicle Cleaning

Heavy Vehicle Cleaning – Bosun's Mate can be used on all areas of heavy vehicles including diggers, loaders, logging and cranes. It is excellent where equipment is located near the coast and exposed to salt air. By using Bosun's Mate as your regular cleaner, it will degrease and protect the vehicle by resisting soil from redepositing to the vehicle. Use at a dilution of 10:1 (100 mls per litre) through a foamer. Agitate then rinse off.

Farm Equipment Cleaning

Farm Equipment Cleaning – using the Bosun's Mate foamer or bucket and sponge/soft bristled brush apply Bosun's Mate all over the equipment. Leave for 5 – 10 mins and rinse off. Use at a dilution rate of 10 -1 (100 mls per litre). The protective layer will assist in stopping soil from redepositing.

**Readily Biodegradable is a term used for substances that meet stringent testing criteria of ultimate biodegradation within 28 days.*
